

MeshUV End-to-End Data Pipeline (Clean V1)

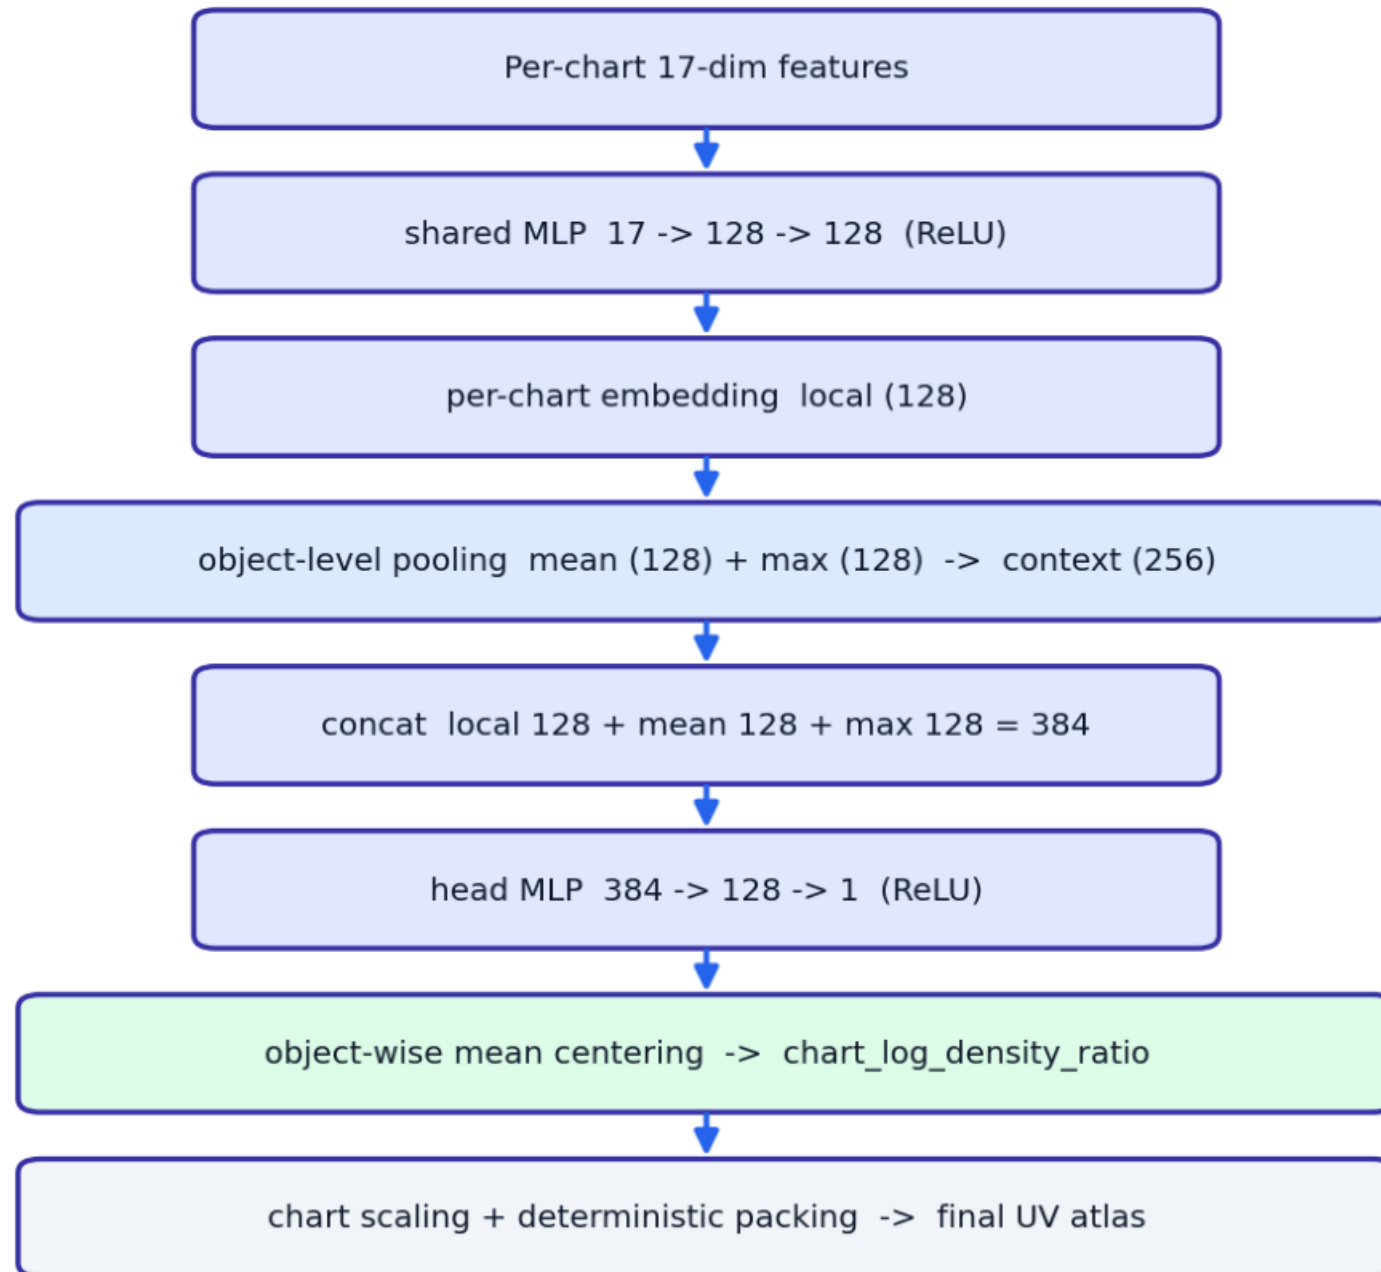

Main failure branches (rejected candidates, not in dataset)

quarantine (rebuild) = 64 | relabel (PNG-u8 re-signal) = 149 | trimmed to extras = 2 [Clean V1 migration]

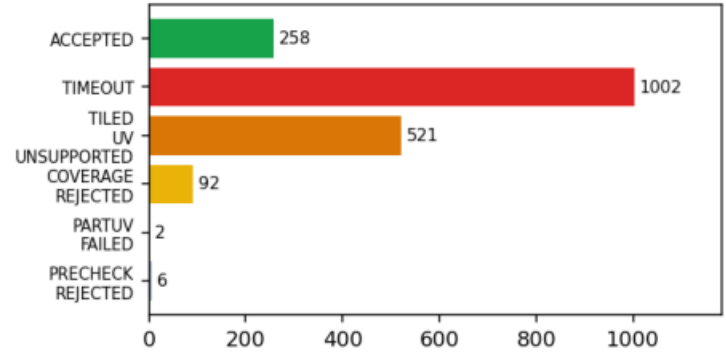

Student-v0 Architecture (handcrafted_signal_baseline)

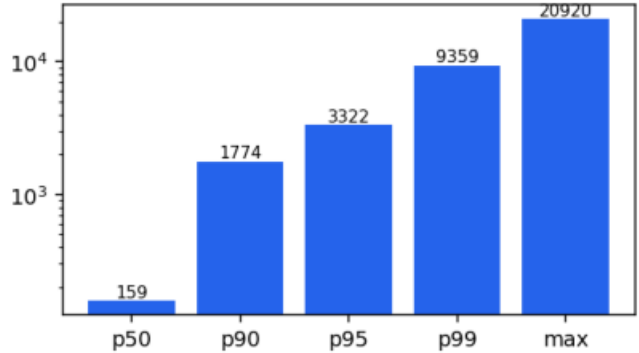

- ~68,225 params | O(C), no attention, no chart graph
- 1 scalar per chart -> no seam, no UV-vertex offset
- Deep-Sets / PointNet-style shared encoder + symmetric pooling
- custom handcrafted-signal MVP baseline (not ArtUV / PartUV / PointNet)

MeshUV Clean V1 — Metrics Dashboard (as of 2026-07-22)

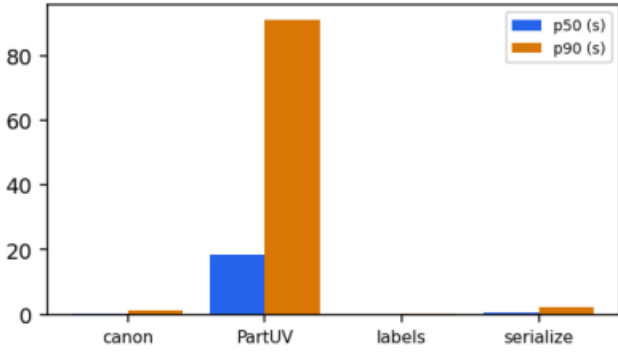

Build funnel (attempted 1881, acc 13.7%)

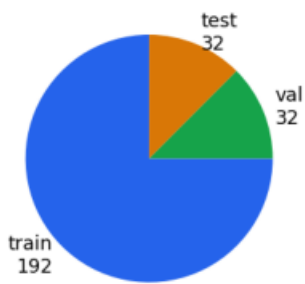

Charts per object (total 191,116)

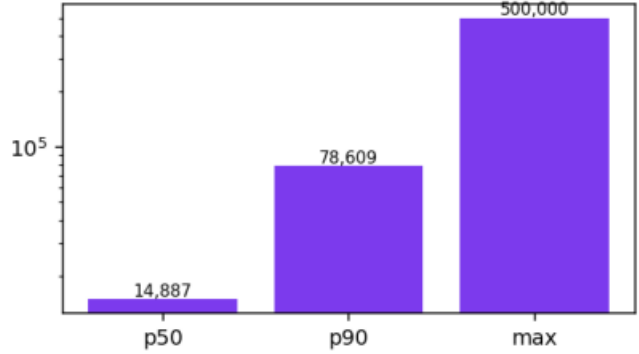

Per-stage time / accepted obj (s)

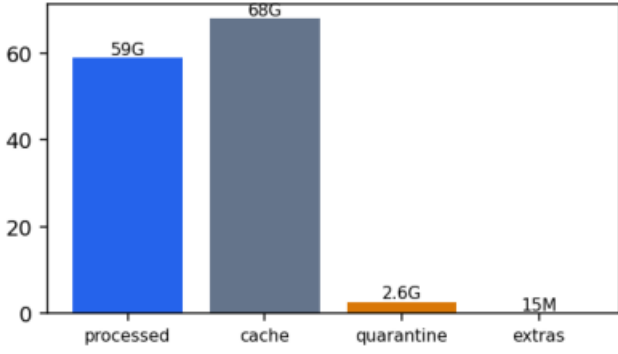

Object split (dup groups 0, overlap 0)

Faces per object (total 8,754,485)

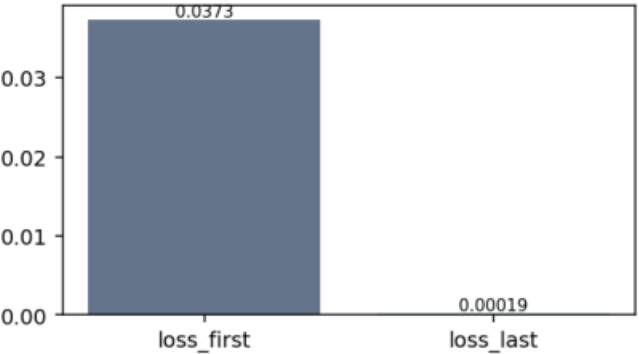

Disk usage (GB)

Final gate (6 conditions)

PASS 256 schema-complete
PASS adapter 100% v2
PASS teacher hash uniform
PASS round-trip drift <= 1e-6
PASS rebuild/relabel = 0
PASS split disjoint+complete

Overfit-8: ratio 0.50% (rho 0.9946)
